

In our business MindVision is more of a partner than a contractor. From concept to realisation, MindVision has consistently delivered flexible and creative solutions to our endless requests for 'more power here' and 'extra whatsits over there'. The staff's attention to detail and constant availability means we can (and do) pick up the phone to discuss any ideas or issues as they arise. This close personal attention has resulted in the development of our class-, and world-leading IT solution.

Michael Smith
Director / Exercise Physiologist
Get Vibrant! Pty Ltd

Get Vibrant!

Get Vibrant! is an interactive tool that provides totally personalised nutrition and exercise plans using cutting edge online technology.

Project

From the outset we realised that this was going to be an iterative project, as a clear specification was not going to be possible. Get Vibrant! shared their vision and we worked as a team to make it a reality.

Core requirements were defined, and from there the platform and technology solutions were chosen. As the scope of the project was changing on a regular basis, billing was to be monthly at an agreed spend per month. Development transparency was a key requirement both to keep costs under control and to ensure that we were delivering against expectations.

Get Vibrant! were given complete access to their project in MVI's job system. They could at any time see what jobs were in the queue, their priority, what was being worked on and what was completed. They also had access to a development environment so that they could test, and provide feedback as soon as a module was completed.

In this way development proceeded smoothly and Get Vibrant! could see that the project and costs were under control, and they had confidence that MVI was delivering real value.

Project management was shared between Get Vibrant! and MVI, as there were a number of experts in various disciplines to co-ordinate in getting the information translated into a specification that could be implemented.

The end result is a good health application without equal.
